

Cloud-Based Business Management Software

Get Started Now at aligntoday.com

Need Help Incorporating Align into your Business?

Align was built on a self-service model to drive accountability, transparency, and alignment towards executing your plan. The Align software can be set-up via the self-service model from within your organization or with help from an Align Advisor.

We understand the launch period is crucial to ensuring successful implementation of the Align software, so we have created two convenient packages to assist you with an effortless set up and implementation.

The Virtual Launch Package is built for the company that does their own quarterly planning, but needs a little help getting the priorities, people and/or One Page Plan content built into Align. If you don't have the time or man-power to load your content into Align and just need a little help, this package is for you. *The Virtual Launch Package* can be purchased one time or quarterly for continued input support.

The On-Site Launch Package is built for the company that needs the full package. With *The On-Site Package* an Align Advisor will come spend a day at your office getting YOUR team aligned. The day will consist of a team-wide training as well as one on one training for those that want additional help. We will help coach the team on creation of SMART priorities and selecting a KPI to help measure their progress throughout the quarter. The One Page Plan, Quarterly Priorities and settings will be entered by our Align Advisor so you are ready to execute for the quarter.
